About this book

Innovations and Advanced Techniques in Computer and Information Sciences and Engineering is a collection of world class paper articles addressing the following topics:

- **Signal and Image Processing:** Content Based Video Retrieval, Character Recognition, Incremental Learning for Speech Recognition, Signal Processing Theory and Methods, and Vision-based Monitoring Systems.
- **Software and Systems:** Activity-Based Software Estimation, Algorithms, Genetic Algorithms, Information Systems Security, Programming Languages, Software Protection Techniques, Software Protection Techniques, and User Interfaces.
- **Distributed Processing:** Asynchronous Message Passing System, Heterogeneous Software Environments, Mobile Ad Hoc Networks, Resource Allocation, and Sensor Networks.
- **Advanced and innovative techniques in computing:** e-Science and Virtual Instrumentation, Fault-Tolerant Scheduling, Grid Computing, Microcracking in Cortical Bones, Service-oriented Architectures, and Virtualization in Data Warehouses.

Written for:

Professors, lecturers, instructors, teachers in colleges and universities, researchers/scientists (national research labs, industry research labs, industrial research and development centers, university research labs), graduate students, post-doctoral fellows and post-graduate students and advanced undergraduate students.
